

PRODUCT NAME : Chassis Board V 1.0
for Arduino/Raspberry-Pi/Roboti
CS

PRICE : Rs 90.00
SKU : RM0096

NOTE: THE PRODUCT MAY BE DIFFERENT FROM IMAGE GIVEN. Copyrights by Robomart.com

DESCRIPTION

This is a High Quality Glass Epoxy Rigid Frame Work for mounting the control circuits. **Chassis Board** is the mechanical frame structure of the mobile robots. It should is the backbone of the robot.

Material of Robosapiens Chassis Board V 1.0:

- Highly durable.
- Highly non- flexible.
- Apt strength.
- Light weight.
- Has potential safety hazards.
- Can be re shaped easily.
- Resistant to corrosion.
- Resists Compression and depression.
- Highly rigid.

Features of Robosapiens Chassis Board V 1.0:

- Single type of screw should be compatible..
- Motor Clamp should is present.
- There is enough space between the chassis and the wheel for proper movement of the wheel.
- This Chassis board can be used for two motor based robot.
- This chassis can be used to build mobile robots.

Applications of Robosapiens Chassis Board V 1.0:

- Robot Rover.
- Multiple DIY projects.
