

PRODUCT NAME : Grove Light Sensors
(P) for Arduino/Raspberry-Pi/Ro
botics

PRICE : Rs 210.00

SKU : RM1378

THIS PRODUCT MAY BE COVERED BY BREVET D'INVENTION. Copyrights by Robomart.com

DESCRIPTION

Grove - Light Sensor(P)

The Light sensor module uses the GL5528 photoresistor to detect the light intensity of the environment. The resistance of the sensor decreases when the light intensity of the environment increases. The chip LM358 is used as a voltage follower to enable you get a accurate data.

Features

- Grove compatible interface
- Wide supply voltage range: 3V-30V
- Miniature HID part

Applications Ideas

- Electronic toys
- Light-control switch
- Monitor

For all Grove users (especially beginners), we provide you guidance PDF documents. Please download and read through [Preface - Getting Started](#) and [Introduction to Grove](#) before your using of the product.

Documents

Please visit our [wiki page](#) for more info about this product. It will be appreciated if you can help us improve the documents, add more demo code or tutorials. For technical support, please post your questions to our [forum](#).
