

PRODUCT NAME : Robosapiens ATMEGA8
IBOT

PRICE : Rs 2,500.00
SKU : RM0105

DESCRIPTION

Atmega8 IBOT is a multipurpose robotics kit. It's multipurpose and very durable nature helps in acquiring expertise on basics of robotics

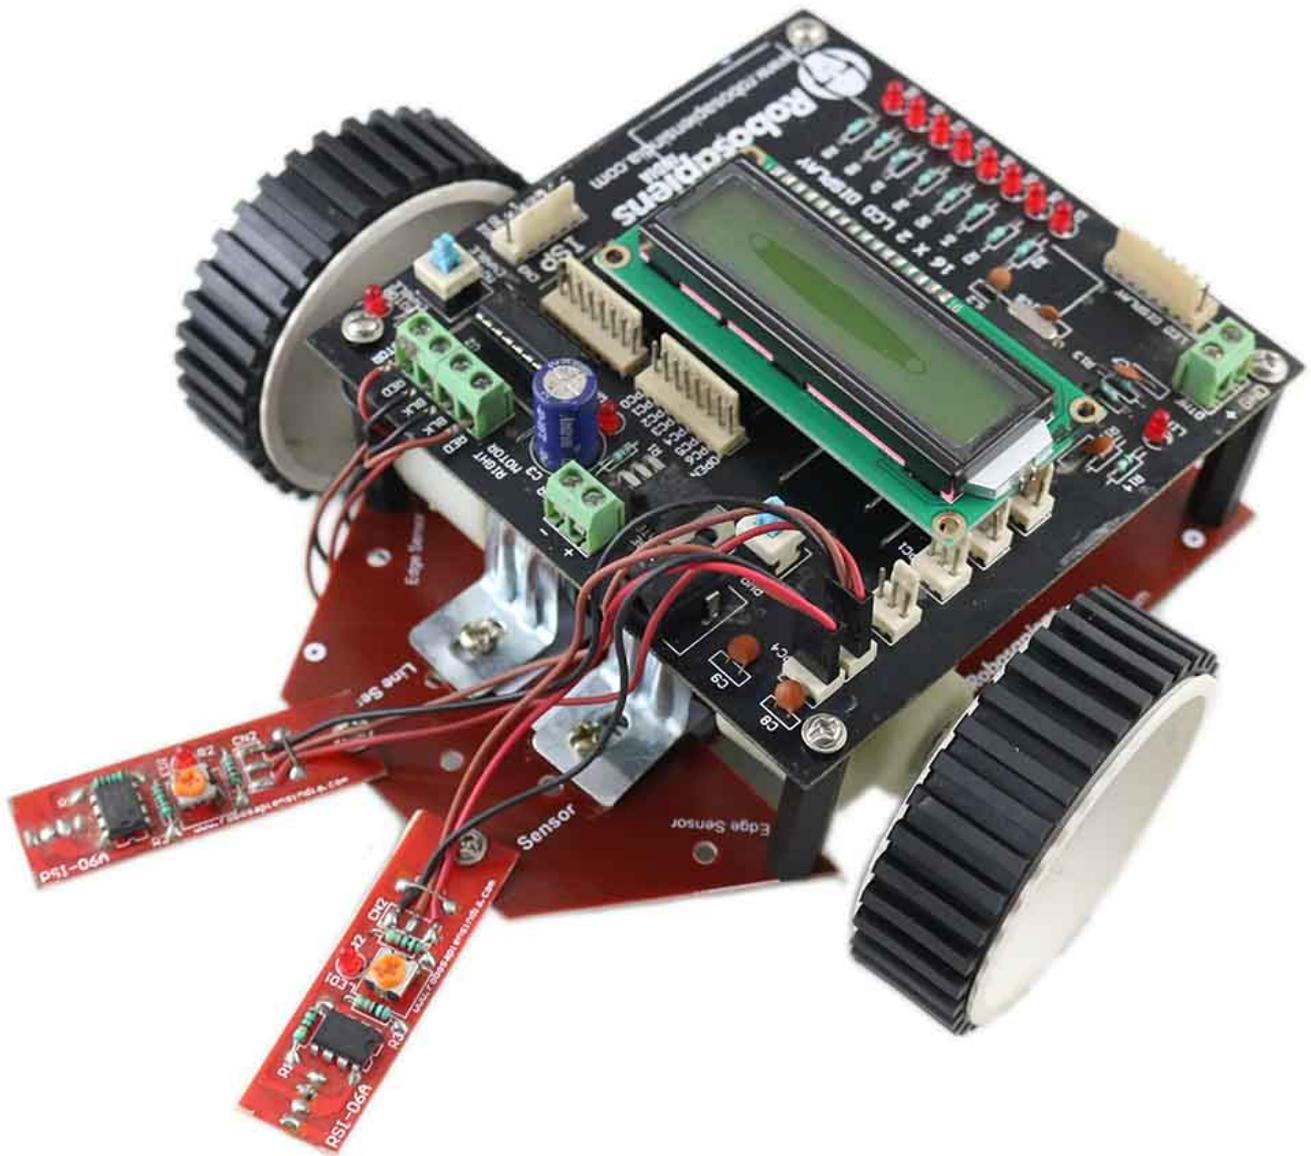

Development Board is made from single sided PTH PCB board to provide extra strength to the connector joints for increased reliability. Board can work on 7V to 15V DC supply. The control circuit or the development board is a versatile robotic development board that is being used to control this robot. By executing 16 MIPS this board can achieve throughput value of 16 MHz. The robot has been made visually interactive as there is one **16 x 2 LCD** for displaying any kind of text and **8 Bit LED'S** to monitor the outputs of the I / O ports. The control circuit is fabricated in a way so that a user interface any kind of peripheral desirable and the control circuit supports Digital, Analog, Serial, SPI based Devices or I2C / TWI based devices.

The robot is basically using one motor driver circuit for its locomotion. The motor driver circuit used, intakes digital inputs to make motors running. Since, the input type for the motor driver circuit is digital one hence, locomotion can easily be done by simply providing digital input to the driver circuit. It has built-in reverse polarity protection. Open pads for connecting microcontroller's pins to external devices are also provided. The robot can be used to develop more than 30 projects using different advanced peripherals.

The robot comes with two **IR based Digital proximity Sensor** that is used as a obstacle sensor. The sensor that is being used is highly flexible and versatile. The sensors can be used as an edge sensor , line sensor , color sensor (black / white) , light sensor etc. The robot is not limited to only digital sensors but also compatible with other analog sensors and different converters.

The robot is best suited for hobbyists and Engineering / Diploma Projects.

Some Images of Robosapiens ATMEGA8 IBOT

Kit Contents of Robosapiens ATMEGA8 IBOT:

- 1x (Atmega -8 Robotic Development Board).
- 1x (ATmega8).
- 1x (Glass Epoxy Chassis Board).
- 1x (16X2 LCD with Female Connector).
- 1x (USB ASP programmer).
- 2x (IR Based Digital Sensors).
- 1x (Metal ball Caster Wheel).
- 1 Pair wheels 72mm Diameter .
- 1 Pair D.C Metal gear motors (BO1-70RPM).

- 1x (Screw driver).
- Other required Tools and accessories etc.
- 1 Nos 8 Wire Jumper Cable.
