

PRODUCT NAME : Arduino YUN

PRICE : Rs 8,999.00

SKU : RM2240

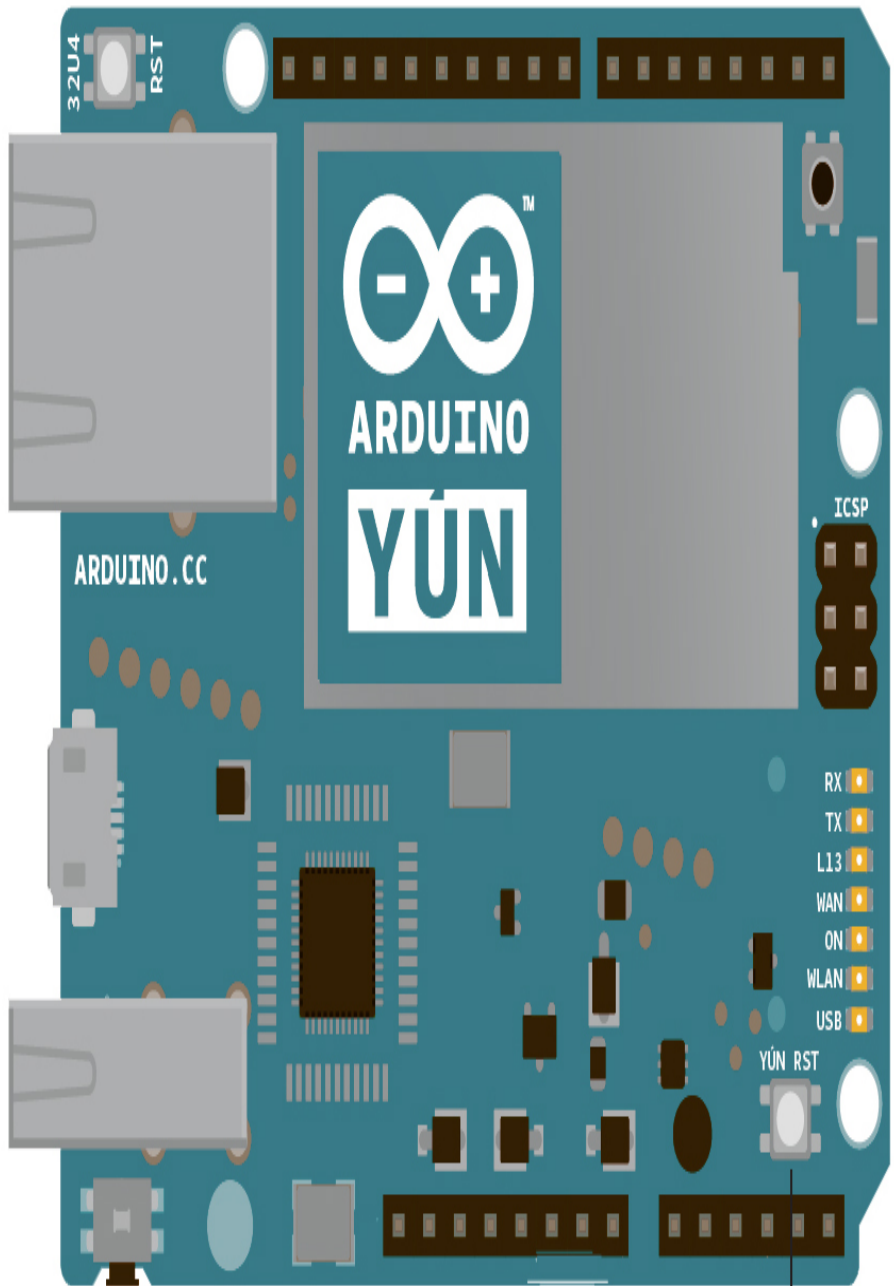

DESCRIPTION

Arduino YUN is a member of a new groundbreaking line of WiFi products combining the power of Linux with the ease of use of Arduino.

The Arduino YÚN is the combination of a classic Arduino Leonardo (based on the Atmega32U4 processor) with a WiFi system-on-chip running OpenWrt-Yun (a GNU/Linux distribution based on OpenWrt). We embedded the Linux machine directly on the PCB of the Arduino Leonardo and we connected the two so that from Arduino it's very easy to run commands on the Linux side and use it as an Ethernet and WiFi interface.

32U4 Reset button

WiFi Reset button

Linino Reboot button

Features of Arduino YUN

- Microcontroller ATmega 32u4
- Operating Voltage 5V
- Input Voltage (recommended) 5V
- Input Voltage (limit) 5V
- Digital I/O Pins 20
- PWM Digital I/O Pins 7
- Analog Input Pins 12

Application of Arduino YUN

- Electronic Projects
- College Projects

Frequently Asked Question for Arduino YUN

Q: where to buy arduino yun

A: robomart.com

Q: how to use arduino yun

A: Approx INR 3499 only
