

**PRODUCT NAME** : Dew Sensor (HDS05)  
For Arduino/Raspberry-Pi/Roboti  
CS

**PRICE** : Rs 275.00  
**SKU** : RM204

## DESCRIPTION

HDS05 the dew sensor is a kind of switching-mode element and only sensitive to high humidity, working under DC. It's used to protect equipment from dew because its high precision and quick response.

## Specifications

- Small and light
- High sensitivity under high-humidity circumstances
- Switching function
- Quick response
- Anti-pollution
- Excellent reliability and stability
- Working voltage: 0.8V DC(Max)
- Working temperature range: 0-100 Deg Celsius
- Working relative humidity range: 0-100%RH
- Dimensions: 8\*10\*0.7mm
- Excellent reliability and stability

## Frequently Asked Question for Dew Sensor (HDS05) For Arduino/Raspberry-Pi/Robotics

**Q: What is the price for Dew Sensor (HDS05) For Arduino/Raspberry-Pi/Robotics**

A: Approx INR 275 only

**Q: Where to buy Dew Sensor (HDS05) For Arduino/Raspberry-Pi/Robotics**

A: Robomart.com
