

PRODUCT NAME : Carbide PCB Drill Bit
t - 0.8mm

PRICE : Rs 79.00
SKU : RM2307

DESCRIPTION

If you've started designing your own PCBs in Eagle or KiCad and want to make your PCB a reality, you may start out with an etching system to pattern out traces. But that's only half the job! You'll also need a way to drill some tiny and accurate holes. That's why we've started selling these PCB drill tips in a variety of sizes.

They're made from carbide (tungsten steel) and are suitable for circuit boards, electronics, SMT, molding, metal processing, telecommunications, and other uses. Each drill tip has a high hardness, wear resistance and strength and they're also super sharp which helps when drilling through PCBs. The drill bits also don't easily bend or break and come in a nice plastic case to store your tips when you're not using them.

Features:

- For drilling components lead wire holes in printed circuit boards
- Suitable for drilling aluminum, fiberglass, circuit board, wood and most plastic including acrylic
- Ideal for model engineering, electronics and jewelry making, etc

Specification:

- Cutting Edge Diameter: Approx. 0.80 mm
- Cutting Edge Length: Approx. 5 mm
- Shank Diameter: Approx. 3.1 mm
- Overall Length: Approx. 38 mm
- Tungsten steel blade, welded iron body
