

PRODUCT NAME : 4-channel I2C-safe Bi-directional Logic Level Converter - BSS138

PRICE : Rs 499.00
SKU : RM3132

DESCRIPTION

This breakout has 4 BSS138 FETs with 10K pullups. It works down to 1.8V on the low side, and up to 10V on the high side. The 10K's do make the interface a little more sluggish than using a TXB0108 or 74LVC245 so we suggest checking those out if you need high-speed transfer.
