(Case, Lens & Wall Mount)
- B+/2/3

PRICE : Rs 4,999.00
SKU : RM3159

DESCRIPTION

This bundle includes a specially designed black matte , a and

The flexibility of this design is ideal for using a Raspberry Pi and its camera module in a variety of applications such as security with a wide angle fish-eye lens, process monitoring, computer vision, high-definition time lapses, motion sensing and many other fun projects.

The 'Nwazet Pi Camera Box' is designed for hosting a Raspberry Pi computer (model A or B) and a Pi Camera module together in a compact and versatile enclosure. This all-integrated design ensures that the camera's fragile ribbon cable doesn't get damaged while exposed during operation. This case can accommodate an optional magnetic camera lens, which opens up new possibilities above and beyond the outstanding optical quality of the Pi Camera module. The black matte case is opaque, ensuring that the red led mounted on the Pi Camera module will not affect the ambient light captured by the camera. The back of the 'Pi Camera Box' can accept an optional wall-mounting bracket for permanent installations.

The Raspberry Pi Camera, enclosed with the Pi in the Camera Box, and equipped with a fish eye lens, is a very capable surveillance and monitoring system that is easy to connect and program. To make the most of it, the Pi Camera box should be steadily mounted to a wall or a ceiling and should be properly angled. This bracket allows tilting and swiveling of the device. Just tighten the thumb screws when you have found the right position and you're done.

The Raspberry Pi's camera offers great features out-of-the box, which can be enhanced by adding interchangeable lenses. The fish-eye lens will give your Raspberry Pi camera a panoramic view of its surroundings, making it perfect for surveillance, security and general monitoring scenarios. The Pi Camera Box is designed to receive the small metal ring needed for binding the magnetized fish-eye lens to the case.
