

PRODUCT NAME : Camera Board 360 Gooseneck Mount

PRICE : Rs 799.00

SKU : RM3163

DESCRIPTION

360 Degree Flexible Gooseneck Raspberry Pi Camera Mount enables you to hold the Raspberry Pi camera in any position - point it up, point it down and point it all around! It's incredibly versatile, and very useful if you won't want to plop it inside a 'block' type acrylic mount. As the name suggests, the mount can be bent in 360 Degree's and 17cm end to end length allows for plenty of flexibility whilst still allowing for millimeter perfect adjustments. It's lightweight, and subsequently works with a case and without a case.

The mount plugs directly into the 3.5mm Audio Jack on the Raspberry Pi, and is specially constructed of black anodised gooseneck tubing that's completely flexible, but stays fixed in the position it's bent into! The tube comes pre-assembled with 3.5mm right-angle audio plug on one end, and a 2mm bolt fixing on the other. Simply slide the 2mm bolt fixing through the top right hand corner of the camera, adding the included Nylon washers on either side, and bolt using the included Nylon half nut!
