

PRODUCT NAME : HighPi Raspberry Pi
B+/2/3 Case

PRICE : Rs 1,999.00
SKU : RM3180

DESCRIPTION

Just a fraction of an inch taller than most of the “standard” cases, but designed to perfectly host many add-on boards like HiFiBerry DAC+. The is d

Installing or removing the Raspberry Pi PI2B board is astonishingly quick, simple, and secure; all without tools or assembly. One snap action locks the Pi board into the case; the second secures the lid, rattle free. Remove the Pi board and the lid with one-finger-releases for each. Genius!

Whether you’re running a plain Raspberry Pi 2 board or modding it to the max, the HighPi case has your Pi covered. Generous internal room allows HATs, break-out boards, or heat sinks. Vents on three sides double as fly-through cable ports for the GPIO and whatever else you need to connect to. A two-section break-out allows you to choose how much of the A/V side of the case to open up for connectors on attached boards.

This case is one of the first to perfectly accommodate the full line of HiFiBerry audio boards. Use one break-out section for DAC+ and Digi+, and both for the Amp+. There is generous clearance around the RCA connectors for bulky, high-end cables. Achieve the sound you want in a clean case design that fits right, right away.

The HighPi PI2B case can be wall mounted horizontally with two screws for easy removal, or mounted in any orientation including upside-down with four screws from inside the case. When wall mounted horizontally, the A/V and audio cables hang downward from the Pi, improving visual tidiness and reducing the need for support of heavy cables.
