

PRODUCT NAME : Pi-AMP+ 35W Stereo Output Board for Pi-DAC+

PRICE : Rs 9,199.00

SKU : RM3187

DESCRIPTION

We have used the latest Texas Instruments ClassD amplifier chipset (TPA3118) to deliver awesome performance. As with our other products you can be assured that the Linux driver support is already built-in to Raspbian Linux and supported by the many software audio packages already on the market. RuneAudio / Volumio / Moode / PiCorePlayer / PiMusicBox / OpenELEC and others. The IQaudIO Pi-AMP+ fits on top of the Pi-DAC+ and supports 24-bit / 192kHz file formats but is equally at home with lower quality MP3s bringing your music alive sonically.

Please note that The Pi-AMP+ uses GPIO22 as amp-mute and when powered on is in mute state, examples are in the user docs and many software releases already support the Pi-AMP+.

The IQaudIO Pi-AMP+ is suitable for the latest Raspberry Pi B+ AND RPi2, it is not compatible with much older Raspberry Pi A and B Models.

The Pi-AMP+ is supplied with all mounting hardware and there is a specific Pi-CASE+ to be used with the Pi, Pi-DAC+ and Pi-AMP+ combination. If you intend to mount your Pi / Pi-DAC+ / Pi-AMP+ on the official 7" screen then you'll need to also buy the extra spacer pack.
