

PRODUCT NAME : ESP8266 wireless module ESP-12E serial port wifi module

PRICE : Rs 399.00
SKU : RM0319

DESCRIPTION

The **ESP8266** is a **Wi-Fi module serial Transceiver** used for wireless data communication. You can also say that WLAN transceiver. It is converting from wired LAN into **wireless LAN (WLAN)**.

Features of ESP8266 Wireless Module ESP-12E Serial Port Wi-Fi Module:

- This module requires a **3.3 volt supply for VCC, and 3.3V logic**.
- Connecting RX or TX on 5V Arduino will destroy this module.
- You must use a logic level converter, or a 3.3V Arduino.
- The 3.3V supply on the Arduino Uno has inadequate current capability to power this module.
- You must provide a separate, higher 3.3V supply (about **300mA or better**).

Applications of ESP8266 Wireless Module ESP-12E Serial Port Wi-Fi Module:

- It is used in wireless data communication.
- Wi-Fi controlled robot.
