

PRODUCT NAME : Desoldering Pump - High Quality

PRICE : Rs 99.00

SKU : RM0355

ALL THE PRODUCT MAY BE COVERED FROM MAJOR ONLINE STORES Copyrights by Robomart.com

DESCRIPTION

DESOLDERING is the process of removing soldered components from a circuit made on PCB. De-soldering pump along with the soldering iron is used for this purpose. A de-soldering pump also known as solder sucker is a small mechanical device which sucks the liquid/molten solder from the joint where the components are mounted.

Features of Disordering Pump - High Quality:

- Use for removing multi-legged Components and excess solder from printed Circuit Board.
- Very easy to operate.
- Sturdy construction, affords quick suction.
- Easy replaceable Teflon nozzle assembly.

Applications of Disordering Pump - High Quality:

- To de-soldering the components.
