DESCRIPTION

XBee or **Zigbee adapter board** is used for interfacing **XBee wireless module** combining both transmitter and receiver on any prototyping board with ease. It has onboard 3.3V low drop voltage regulator and LED indicators for RSSI, Associate and Power. Connections to all pins of the **Zigbee wireless module** are available using (2 x 10) 0.07inch (2.0 mm) pitch male and female berg connectors in the same order as of the XBee wireless module. It can be directly mounted on the general purpose PCB board. The Board provides us with an easy way to interface the adapter with any device compatible with serial communication. For better interaction and monitoring the Rx and Tx of Xbee the board has LEDs to show the status of receiving and transmitting.
