DESCRIPTION

A **resistor** is a passive two-terminal electrical component that implements electrical resistance as a circuit element. Resistors act to reduce current flow, and, at the same time, act to **lower voltage levels within circuits**. In electronic circuits, resistors are used to limit current flow, to **adjust signal levels**, **bias** active elements, and terminate transmission lines among other uses.

Features of 3.8 Kilo OHM-1/4 Watt Resistor .

- Resistance: **3.8 K?**.
